

# Apple OnLine Update

## Quotes Fixed

- **Multi room quote no longer causes air to display twice**  
When quoting a multiple room booking the air portion would display twice making it look as though the air was double booked. We have fixed this now so the layout is clean and easy to read.
- **Children on quotes, the total number of passengers is no longer doubled by the number of children**  
Whenever children were included in a quote, the system would count the children twice making a 2 adult 2 child booking show as 6 passengers. This is fixed! Passenger counts will show correctly as booked on all quotes!
- **Meal Plans will now show correctly**  
Previously when making a Hawaii booking, a Breakfast Plan would occasionally appear erroneously on the quote but not in the booking itself. No more! You can now count on the meal plan that is displayed as being the correct one and included in the quoted price
- **Quotes with cars & apple extras will display the costs in a separate section for a more detailed view and will be included in the total quote price**  
The total price in the detail section of a quote could show a lower amount than the total quote price as not all components were being included in the detailed section such as cars and excursions. This had been corrected and All total price sections of a quote will now display as the same amounts
